

Jabra Elite 65t - Gold Beige

Why did the audio pause when I removed one of my earbuds?

There are two factors that cause the audio to pause when you remove one of your earbuds.

- Auto-pause audio*

If you remove one of the earbuds while you are listening to audio, the audio will automatically pause. If you then replace the earbud in your ear within 60 seconds, the audio will resume automatically. If you replace the earbud in your ear after more than 60 seconds have passed, press the **Multi-function** button on the right earbud to resume the audio.

- Near-Field Magnetic Induction (NFMI)

The earbuds use NFMI to connect with each other. When the earbuds are connected, the maximum range between them is 20cm/8in. If you remove one of your earbuds and the maximum range is exceeded, the NFMI connection is broken and the earbuds will then lose connection with each other.

- If the NFMI connection is broken and auto-pause audio is turned on, the smartphone will cease transmitting audio to the earbuds. The audio will pause regardless of which earbud you have removed.
- If the NFMI connection is broken and auto-pause audio is turned off, the left earbud will lose connection with the right earbud. If you have removed the left earbud, the audio will continue playing in the right earbud. However, if you have removed the right earbud, you will lose audio in the left earbud.

If both earbuds are turned on, bring them within range of each other to automatically reconnect them and restore the NFMI connection.

Note

*Auto-pause audio is on by default. To change this setting in Jabra Sound+ go to **Headset, Headset settings, Audio experience, Auto-pause audio**.

You can download Jabra Sound+ from [Google Play](#) on your Android device and from the [App Store](#) on your iOS device.
